

SPRING, ACOUSTIC PANELS

Konto

SPRING

Spring acoustic panels are inspired by the organic forms of nature - the leaves and flowers of trees. The set comes in three different sizes and can be arranged on the wall in different ways.

The material is the Finnish Kontu surface peat with a 20% polyester binder. Four panel strength options are available: 20, 30, 40 and 50 mm. Sound absorption class when directly fixed to the wall D - A / EN ISO 11654, depending on the strength of the material.

The product has an indoor climate rating of M1, which means that the material or paint does not emit any emissions or odours that are harmful to health. The basic quality has a fire classification of class E. A more fire-safe quality (B-grade) is also available, classified B-s3-d0. The material has good moisture tolerance and is mildew resistant (pH acidic).

The panels have a natural, uneven surface with variations in colour and smoothness. There may also be differences in colour between series painted at different times.

Standard colours

- White
- Black
- Red M326
- Grey 1933
- Turquoise S2055
- Custom colour specifications: RAL, NCS or Tikkurila

Sizes

- 600×500 mm (S)
- 750×500 mm (M)
- 900×600 mm (L)

Installation and maintenance

- Spring acoustic panels are lightweight and easy to install, e.g. with an adhesive for acoustic panels, or with Velcro. The surface can be lightly vacuumed with a soft nozzle. Eventually, the product can be recycled as energy waste
- Designed for Mood: Matti Syrjälä & Erik Bertell
