

FOLDING WALL

soften®

FOLDING WALL

In particular, the folding walls used as a background for video work provide an elegant backdrop to the view and give the work a silent background. The wall can be folded into a small space for storage and opened for use as a folding wall unit. The wall is light but stands firmly.

The walls are made of polyester plastic and are available in four standard colours. Maximum width is 1250 mm and height c. 1900 mm. It is possible to install several wall units in parallel and they also work well as easily movable room dividers.

The folding walls designed by Mood are manufactured by the Finnish company Soften Oy.

- material 100% PES (made from recycled PET bottles)
- basic size L 1250 x H 1500 mm (depth of fold 250 mm)
- standard colours light grey, dark grey, white or black
- sound-damping and sound-proofing
- indoor climate classification M1
