

MOOD IMAGE WALLPAPERS

MOOD KUVATAPETIT

Any colour, image or pattern can be printed on the surface of the printable wallpaper. The "Removable" grade mainly used by Mood is adhesive-based, so no wallpaper paste is required for installation. Over time, the wallpaper will peel off easily, leaving the underlying wall undamaged.

The wallpaper surface consists of several seams and there is a small overlap where the seams meet. The seam can also be cut to fit, but then there will be a slight incision in the wall surface underneath.

The material can also be used for furniture surfaces, e.g. cabinet doors. In areas requiring special wear resistance, the surface can also be coated with a protective laminate.

Wallpaper quality

- vinyl (PVC) film, Wall Film Removable
- adhesive that will in time easily peel off the wall
- white
- satin surface
- fire classification B -s2, d0 / EN 13501, self-extinguishing
- roll width 1370 mm (print width max. 1340 mm)

Design

We also offer project-specific order design of patterns. The image material can also be the client's own, or acquired from image databases (e.g. vastavalo.fi). We evaluate the quality of the images for the planned size and prepare the production files with the appropriate seam width.

Printout

- HP Latex printing
- water-based paints are odourless and do not emit gases harmful to the environment or health (VOC, HAP)
- good colour fastness

Measurement visits and installations

Mood typically takes the necessary precision measurements and is therefore also responsible for the accuracy of the measurements. At the same time, the suitability of the material for the wall surface in question is evaluated.

Our skilled and swift partner - our installation team will carry out installations to a high standard and within the agreed timeframe.

The delivery time for wallpaper is approx. 2 - 4 weeks, depending on the stock situation of the material.
